PRICE INDICES

WHOLESALE PRICE INDEX
(Year 1957 to 2007)

&

CONSUMER PRICE INDEX FOR INDUSTRIAL WORKERS
(Year 1978 to 2007)

OF

RAJASTHAN AND ALL INDIA

**DIRECTORATE OF ECONOMICS & STATISTICS,
RAJASTHAN, JAIPUR**

Foreword

The need for price statistics of the State that is comparable over time had been felt for monitoring of schemes and various other purposes. This has been addressed and for the first time, Directorate of Economics & Statistics has prepared the **Price Statistics of 51 years (1957 to 2007)**.

This publication presents a comprehensive statistical database on Wholesale Price Index by All Commodities, Major Group, Subgroup-wise according to Calendar & Financial year of Rajasthan and All India. Similarly, Consumer Price Indices for Industrial workers of Ajmer, Jaipur & Bhilwara centres of Rajasthan and All India have also been included in it.

It is envisaged that the publication would be helpful to review Price Statistics including Inflation. Price stability is essential for sustaining the momentum of growth and ensuring proper distribution of the benefits of development. Wholesale price Index as well as consumer Price Index indicates the trend of price variations in the economy.

The efforts made by DES officers and staff are appreciable. I hope that the publication would be useful for researchers, policy makers and planners. Comments and suggestions to further improve the areas covered in it are particularly welcome.

Jaipur
July, 2008

(Yaduvendra Mathur)
Secretary, Plan

PREFACE

Wholesale Price Indices of Rajasthan from 1957 to 2007, is an important publication of this Directorate. The need for providing time-series at one place with a view to study the changes in the price structure over time has long been felt in connection with the policy formulation and planning. The Directorate of Economics & Statistics, Rajasthan has taken up preparation of time series for important sectors like Price Statistics, Agriculture Statistics, Financial Structure of the State Economy, State Domestic Product, etc. The present publication pertains to Wholesale Price Indices Rajasthan, provides time series for 51 years (1957-2007), which include yearly, monthly & group-wise index of Rajasthan as well as All India.

Consumer Price Index for Industrial Workers viz; CPI (IW) is compiled & released by Labour Bureau, Shimla covering 78 centres of the country including Ajmer, Bhilwra and Jaipur centres of Rajasthan. In the publication, year/month-wise CPI (IW) for Ajmer, Bhilwara & Jaipur centres and at All India level are included from 1978 to 2007.

My sincere thank to officers and officials of Price Unit for their valuable contribution in bringing out this publication.

I hope, this publication would be immensely useful for Scholars, Administrators, Planners and Academicians.

Suggestions for improving the coverage and presentation of information are most welcome.

CHAPTER - 1

PRICE STATISTICS

Importance and uses

Prices permeate and exert a controlling force on the entire economy. They induce people to produce or to work and earn. They compel consumers to restrain demand or spend more. An important characteristic of prices, which necessitate monitoring of price changes, is their volatility. They seldom remain constant. Prices of different groups of commodities never move with the same speed or in the same direction. Hence, price changes affect the fortunes of individuals or groups, and for that matter, the whole economy in several ways. They perform a number of functions in an economic system. They help in balancing demand and supply, in allocation of productive resources, in allocation of consumer's income, in distribution of income, monitoring and forecasting economic conditions and in assessing the impact of monetary and fiscal policies. It is in this context that governments in all countries at the national as well as provincial (state) levels keep a watch on price changes or price movements. Price index numbers is a convenient tool to observe and monitor price changes.

Price index numbers have been used for several purposes. First, the primary use of the state level WPI is in computation of GSDP as deflators. Second, these are used to measure the rate of inflation in the economy. Third, they are useful in monitoring changes in relative prices of different groups of commodities like primary articles, agricultural commodities, raw material prices, prices of industrial products, food prices, and administered prices. Fourth, price index numbers at state level help in comparing price changes at the state level vis-à-vis at national and global level. Fifth, these are used as deflators for computation of several other economic parameters like real prices, real costs, terms of trade indices, and real gross and per capita incomes.

There are three main stages of marketing for construction of price index numbers and monitoring of prices. These are farm harvest prices, wholesale prices and retail prices. The Wholesale Price Index is important as it helps in understanding the movement of prices relating to bulk transactions of commodities. Conventionally, the wholesale price index has been used to measure the variations in exchange value or purchasing power of money. It has also been utilised for other purposes like forecasting changes in business conditions indicating supply demand relationships and deflating aggregates such as national income.

At present, a number of government departments, semi-government bodies, chambers of commerce and industry, trade associations and private concerns are using the index of wholesale prices extensively. Use

of wholesale price index for a particular period is also made while entering into a contract for the supply of raw materials and machinery. Some units in public and private sectors are also using the indices for the purposes of escalation clause in the supply of raw materials, machinery and construction work.

The Directorate of Economics & Statistics is collecting, on regular basis, the wholesale & consumer prices of essential commodities from selected centres in the State. On the basis of these prices, monthly wholesale price indices are being prepared regularly.

(1) Wholesale Price Index (WPI) on Base year 1999-2000=100

The wholesale prices of selected agricultural, minerals, fuel, power, light & lubricants and manufactured commodities are collected on every Friday in 76 selected centres for 154 items. 29 District Statistical Offices and 47 Kirshi Upaj Mandies, provide information on prices in respect of their commodities from corresponding market/centres. The Directorate uses these prices for compiling monthly index series of wholesale prices for Rajasthan on the basis of weights assigned to various commodities during the base year 1999-2000=100.

The weighted index is broadly classified in three groups as under:-

- i) Primary Articles,
- ii) Fuel, power, light & lubricants, and
- iii) Manufactured Products.

(i) INTRODUCTION OF REVISED SERIES OF INDEX NUMBERS:

Revised Base Year (1999-2000=100)

The Directorate of Economics and Statistics, has introduced the revised series of the Index of Wholesale Prices (base 1999-2000=100) by replacing the old WPI series (Base 1952-53=100) with effect from 1st January 2005, in Rajasthan.

The revised series 1999-2000 has 154 items for which there are 384 quotations. The average number of price quotations per item works out to 2.49 for the revised series have a substantially up dated. All items having large transaction in the State's economy have been included in revised series to the extent possible. Thus, the revised series have a substantially updated and representative basket of commodities as well as variety/grades and market.

Incorporating important new items, dropping unimportant items and amalgamating items with those to which they are akin, have rationalized the coverage of the new series.

108 distinctly new items had been added in the revised series. A few items of the old series had been amalgamated because of their similarity in characteristics and for making their description more purposeful. Only eleven items from the 1952-53 series had been dropped due to their insignificant contribution in terms of their relative value of production in the economy.

A comparison of the number of items and price quotations (at the level of major groups) in the old as well as in the revised base series is presented in Table 1.

Table-1
Comparison of the number of items and price quotations
(Major Groups)

S. No.	Description	Number of Items in series		Number of Quotations in series	
		1999-2000	1952-53	1999-2000	1952-53
	All Commodities	154	59	384	102
i	Primary Articles	75	15	187	34
	Raw Materials		9		21
ii	Fuel, Power Light & Lubricants	10	5	15	6
iii	Manufactured Products	69	30	182	41

All the three major groups viz; Primary Articles; Fuel, Power, Light & Lubricants; and Manufactured Products have expanded in respect of number of items in the revised series. Within Primary Articles, the group 'Food articles', 'Non-food articles' and 'Minerals' have recorded substantial increase in the revised series.

ii) Weighting Diagram

The methodology adopted in the current series has also been followed for the revised series. The weights of the items are based on the value of transactions, which consist of (a) value of estimated marketed surplus in the case of agricultural commodities, (b) value of products for sale in the case of non-agricultural products, and (c) total value of turnover for others. Weights have been assigned on the basis of the entire wholesale transactions in the economy. The value of transactions of non-selected commodities has been assigned to the selected items on a pro rata basis.

Within the agricultural sector, individual commodities have been assigned weights on the basis of the value of marketed surplus during the year 1999-2000. The revised series has utilised the estimated-

marketed surplus ratios pertaining to the base year, a practice that was started from the present series as proposed by the Advisory Committee.

In the minerals group, the allocation of weights to individual commodities is based on the sale value of production during the year 1999-2000. In other case major groups, Manufactured Products and Fuel, Power, Light & Lubricants, the weight have been assigned on the basis of sale values, which were obtained from concerned agencies/departments for the year 1999-2000. The weights of other miscellaneous manufactured items, which are dropped, have been distributed pro-rata among other groups within the major group.

A comparative picture of the weighting diagrams of the old and the revised series, at the level of major groups, is presented in Table 2.

Table-2
Weighting Diagram of the Revised and old series

Description	1999-2000 Series	1952-53 Series
All Commodities	100.00	100.00
i Primary Articles	33.894	52.750
Raw Materials		6.427
ii Fuel, Power, Light & Lubricants	16.253	3.069
iii Manufactured products	49.853	37.754

It may be seen from the above table that the weight of 'Primary Articles' has significantly declined while that of 'Fuel, Power, Light & Lubricants' and 'Manufactured Products' have gone up considerably in the revised series. This situation has arisen as a consequence of the relative decline, particularly, in 'food articles' and growth in 'non-food articles' in the major group of Primary Articles. The new weighting diagram is, thus, in conformity with the structural changes that have taken place in the economy since the introduction of the current series.

(iii) COMPARISON BETWEEN REVISED SERIES AND OLD SERIES

Monthly/Annual rates of changes in WPI have been calculated both for the revised series and the old series. These have been shown along with the indices given in Table-3

The Advisory Committee has adopted the practice of using the average of monthly indices for the year 1999-2000 (i.e., annual average) with 1952-53 bases to estimate the linking factors of the old series for

comparison with the new series. It is also noted that the linking factor has been used for “All Commodities”.

Comparison of the new series with the old series at the “All Commodities” level depicts that the new series of indices start at a higher level than the old series, which relatively has highest annual rate of change (ARC) in the year 2001-02. Usually, the ARC during the years 1999-2000 to 2002-03 shows corresponding increasing trend.

Table-3
Comparison of New and Old series

Year	Annual Average Index Values		Annual Rate of Change	
	1999-2000	1952-53	1999-2000	1952-53
1999-2000	100.00	100.00		
2000-2001	104.39	103.94	4.39	3.94
2001-2002	111.05	105.51	6.38	1.51
2002-2003	115.85	110.16	4.32	4.41

(iv) Linking Factor

To maintain continuity in the index series data on Wholesale Price Index, there is a need for a linking factor so that the new series may be compared with the out going one. The linking of the two series is significant on two counts. Firstly, it provides a basis for determination of cost escalation, wage settlement etc. and secondly, it generates a long duration time series information which can be used for conducting certain analytical studies on the behavior of prices.

There are generally three different methods used for linking a new series with an old one. These are (1) arithmetic conversion method, (2) ratio method and (3) regression method. Of the three methods, the arithmetic conversion method is the simplest and operationally, the most convenient one. The Directorate of the Economic and Statistics has been using this method to link various series. The choice of linking method is however, left to be decided by the users.

Linking factors have been used at the 'All Commodities' level. The arithmetic conversion method is the simplest one. According to this method, the linking factor is the ratio of average of monthly WPI of the old series to the average of monthly WPI for the same period (generally the base period) of the new series. This comes to 24.4491.

(v) Methodology

It is calculated on the principle of weighted arithmetic mean according to the Laspeyre's formula, which has fixed base year weights operating through the entire life span of the series.

The index should be calculated on the principle of weighted arithmetic mean. The following formula currently being used should be used in the revised series also.

$$I = \frac{\sum (I_i \times W_i)}{\sum W_i}$$

Where

I = Index Number of wholesale prices of a sub-group/group/major group/All commodities,

S = Represents the summation operation,

W_i = the weight assigned to the ith item/sub-group/group/ major group and

I_i = Index of the ith item/sub-group/group/major group.

Price relatives are calculated as the percentage ratios, which the current prices bear to those prevailing in the base period, i.e. by dividing the current price by the base period price and multiplying the quotient by 100. The commodity index is arrived at as the simple arithmetic average of the price relatives of all the varieties included under that commodity. The indices for the sub-groups/groups/major groups/all commodities are, in turn worked out as the weighted arithmetic mean of the indices of the items/sub-group/groups/major groups falling under their respective heads.

CHAPTER - 2

OLD SERIES OF WHOLESALE PRICE INDEX OF RAJASTHAN

Since the beginning of the year 1957, the Directorate of Economics and Statistics, Rajasthan has been preparing Wholesale Price Index of the State with 1952-53=100 as the base year. It is prepared on the basis of following weights and items for the major groups:

Groups	Actual weight	Weight (Percent)	Number of Items	Number of Quotations
1	2	3	4	5
1. Food Articles	1266	73.3	21	42
2. Industrial Raw material	111	6.4	9	21
3. Fuel Power Light & Lubricants	53	3.1	5	06
4. Manufacturing	297	17.2	24	33
Total	1727	100.0	59	102

The choice of commodities was made looking to the importance of each and every item in the economy of the State and its overall contribution in country's production. The choice of commodity specification and markets for reporting price quotations is based on relative merits with references to the model specifications and bulk transactions. For agricultural commodities, district headquarters in main producing areas and consuming regions where mandies existed have been chosen for price reporting.

The weights to various items have been assigned in proportion to the relative marketed value of commodities transacted in the State during the base year. In case of agricultural commodities, the quantity retained by the farmers/producers for the purpose of seed and own consumption has been adjusted with the local production.

Price quotations for the specified commodities are collected on weekly basis on every Friday from selected mandies by the agencies assigned for the purpose of price collection. Ordinarily, at the centres other than district headquarters, the tehsildars are reporting officers. Except Jaipur, where number of commodities to be reported is relatively large, the district statistical officer is the reporting agency and the district supply officers have been assigned with the work of price collection reports in all other districts.

The prices of commodities received from the field agencies are processed in the Directorate and used for construction of wholesale price index. After the scrutiny of the price quotations, price relative, which is the percentage ratio which the current price quotation bears to that prevailing in the base period, is worked out. The commodity index is worked out as simple arithmetic average of price relatives of different varieties. The group index is arrived at by the weighted arithmetic mean of the commodity indices. All commodity index is compiled as weighted arithmetic mean of the group indices.

The list of commodities, price collection centres, assigned weights and the base price of the current WPI are given below:-

Wholesale Price Index Numbers of Rajasthan

(Base Year 1952-53=100)					
S.No.	Commodity/Variety	Centre	Unit	Weight	Weight (Relative)
	ALL COMMODITIES			1727.00	100.000

CHAPTER – 3

WHOLESALE PRICE INDEX IN INDIA

History of WPI in India

- (i) The first series of WPI in India was brought out by the office of the Economic Adviser to the Government of India from the week commencing January 10, 1942. This indices had a base of week ended August 19, 1939 and included 23 commodities classified into four groups. Each item had an equal weight and a single price quotation.
- (ii) In 1945, a new “Food Articles” index was brought out with the last week of August 1939 as the base. However, subsequently the base period was shifted to the year ending August 1939.
- (iii) Since then, there had been at least six revisions in the WPI series in India. The details are as follows:

Starting Date or Period	Base Period	Number of Commodities	No. of Quotations
• January 1947 to April 1960	Year ending August 1939	78	215
• April 1956 to September 1969	1952-53	112	555
• July 1969 to December 1976	1961-62	218	767
• January 1977	1970-71	360	1295
• July 1989	1981-82	447	2371
• April 2000	1993-94	435	1918
