**Department of Planning**

## **PREFACE**

The Cost of Construction of residential houses has undergone a tremendous change during the past decades. The Directorate of Economics and Statistics is regularly computing Indices for Construction of Residential house building for Jaipur Centre with the base 1971=100. The publication gives annual and quarterly average Indices of Prices of Building Material and Wages of Labour engaged in construction of houses, besides General Cost of Construction Index from 2016 to 2024. An attempt has been made to incorporate the changes in index number of prices during these years, so that a view of changes reflected from 2016 to 2024 could be taken. Percentage variation over previous year and average increase in Indices per year have also been worked out and included in the report.

The methodology for the weighting diagram used in the computation of indices, along with the proforma for collecting prices of building materials and wage rates for different categories of labor, also forms part of the report. It is hoped that the report will be useful in studying the changes in the cost of construction of houses in Jaipur. Any suggestions for improvement are welcome.

# **Index Numbers of Building Construction Cost, Jaipur center**

## **Introduction**

The objective of preparing index numbers for the cost of construction of houses is to measure the relative changes in the value of constructing a house of the same type and size at a specific location over different points in time. This is particularly important as there has been a continuous rise in construction costs in recent years. The cost of building construction depends on two main factors: the cost of materials used and the cost of labor employed. The Directorate of Economics & Statistics has been collecting and compiling data on the prices of building materials and wages of construction labour on a quarterly basis since 1971. This report aims to analyze the trends in the prices of building materials and wages of construction labor for the Jaipur center from 2016 to 2024, using 1971 = 100 as the base year. The analysis specifically focuses on the low-income group houses constructed by the Rajasthan Housing Board in Jaipur.

## **Collection of prices**

The price data have been collected from an official source (Office of the Deputy Director, Economics & Statistics, Jaipur) on a quarterly basis. These prices reflect the amounts actually paid by the builder for specific qualities of material and labour.

## **Choice of base year**

In the existing building construction cost index, the year 1971 has been selected as the base year. This year was chosen because it was considered a normal year in terms of construction activities and price trends for building materials and labour.

---

## Weighting Systems

In the existing series (base 1971 = 100), weights have been assigned based on the proportion of expenditure incurred on each item of building material and labor relative to the total cost of constructing a residential house on a 20' x 50' plot (a two-room low-income group house) built by the Rajasthan Housing Board in Jaipur in 1971. The derived weighting diagram is shown below, with 61.04% of the weight assigned to building materials and 38.96% to labour.

### Weighting diagram used for the Construction of Building Cost Indices for Jaipur.

	<b>(A) Building Material</b>	<b>61.04</b>
1.	Bricks	0.86
2.	Sand	7.36
3.	Stone Ballast	8.66
4.	Lime	12.12
5.	Timber	4.76
6.	Cement	4.33
7.	STEEL	4.33
8.	Stone Slabs, Asbestos Cement Sheets & Tiles	8.22
9.	Paint & Varnish	0.87
10.	Sheet Glass	0.87
11.	Sanitary Wares	8.66
	<b>(B) INDEX FOR LABOUR</b>	<b>38.96</b>
	1. Mason	19.05
	2. Carpenter	1.73
	3. Un- Skilled Labour	18.18
	<b>TOTAL (A+B)</b>	<b>100.00</b>

## Methodology of construction of the Index

The weighted arithmetic average method (Laspeyre's fixed base) is used to compute the index for each variety of material/labor. The price relative is calculated by dividing the current price rate by the corresponding base period price rate. The weighted arithmetic average of the price relatives of the varieties is then taken as the material/labor index. The weighted arithmetic average of these material price indices and labor wage indices gives the general building construction cost index.

Symbolically

$$P_j = P_{ij} / P_{oj}$$

Where  $P_{ij}$  = price at time i of commodity j

$P_{oj}$  = price at time o of commodity j

$P_j$  = price relative for commodity j

$$I_g = \frac{\sum_j W_{gj} P_j}{\sum_j W_{gj}}$$

$W_{gj}$  = Weight for commodity j of the group G

$I_g$  = Group index i.e index for building material/labour

$$I_b = \frac{\sum_g W_g I_g}{\sum_g W_g}$$

Where  $W_g = \sum_j W_{gj}$

$\sum_g W_g = 100$  (Total Weights)

and  $I_b$  = General building construction cost index.

The indices are currently calculated on a quarterly basis and are then converted into an annual index by simply averaging the quarterly index numbers.

---

## Review

The index numbers for the prices of building materials and wages of building construction labour have been prepared for the Jaipur Centre, with 1971 = 100 as the base year, for the items of building materials and labour specified in the previously provided weighting diagram. The list of commodities, along with their specifications for which prices were collected, is provided in Appendix I. The categories of workers for which wage rates were collected are listed in Appendix II.

## Analysis of data

**Table No. 1** presents the index numbers for the cost of construction materials of a residential house for the period 2015 to 2024. It is observed from this table that, over the years, the prices of building materials have continuously risen. The highest increase in building material prices was recorded in 2018 (20.28%), followed by 2024 (5.24%) and 2017 (4.39%). The lowest increase, a negative change of -4.97%, occurred in 2020 compared to 2019.

**Table No. 2** shows the index numbers for wages of construction labor for the period 2016 to 2024. It is evident from this table that the index numbers for labor wages have also risen steadily, though not uniformly. The highest annual increase of 11.69% was recorded in 2022 compared to 2021, followed by 2019 (11.24%) and 2009 (6.38%). The lowest increase, 1.42%, was recorded in 2023 compared to 2022.

**Table No. 3** (combining the data from Table No. 1 and Table No. 2) presents the index numbers for the total building construction cost, including both materials and labor. It is observed from this table that the index numbers for the cost of constructing houses in Jaipur city have consistently risen. The general index of the cost of construction has increased from 6,411.10 in 2016 to 8,536.44 in 2024. The lowest increase, a negative change of -0.39%, occurred in 2021 compared to the previous year, while the highest increase of 8.62% was recorded in 2018, followed by 8.22% in 2022 and 7.00% in 2019.
